

SELECTED PUBLICATIONS ON RAMÓN Y CAJAL OR OF HIS WORKS

Compiled by Duane E. Haines

This section of the Proceedings is not an attempt to generate a complete list of publications on, or about, Cajal. Rather it is an effort, on the part of the Alpha Helix, to bring to the attention of the membership publications which may not be known to all. Over the years the Alpha Helix has fallen heir to eight papers on Cajal dated 1926-1953. Seven of these were published and their citations are given. The eighth is a presumably unpublished manuscript by John F. Fulton on 8.5 X 11.0 sheets, double spaced, and reproduced in a mimeographed style. The pages have turned somewhat brown, but are easy to read. A footnote on the first page reads, "French text read for the Comité Español del V Congreso Internacional de Neurologia at the Cajal Festival, Madrid, 14 September, 1953; English text read at meeting of Beaumont Club, New Haven, 20 November 1953, and with modifications at the Osler Club of Philadelphia on 11 December 1953". Perhaps in the future, with proper permission, we will be able to publish this manuscript in the proceedings.

Additional references included here are of various translations (some earlier, some quite recent) of some of the works of Cajal. All

members are certainly aware of "Recollections of My Life" as translated by Dr. E. Home Craigie. This book is now available in paperback. "Cajal's Degeneration and Regeneration of the Nervous System" has been reissued (1991) as one volume. Of particular note is the long awaited translation of "Histology of the Nervous System of Man and Vertebrates". This monumental accomplishment was completed by Swanson and Swanson, and published by Oxford (in 2 volumes) in 1995. This set of books is available from Oxford at a special price to members of the Cajal Club; it is certainly a must for any student of Ramón y Cajal.

Also included are references of several abstracts of papers on Cajal that have been presented at meetings of the American Association of Anatomists, Society for Neuroscience, and American Association of Neurological Surgeons. A number of additional references were found in a medline search covering the time frame of 1966 - present, and these are also listed. Some of these references were not verified, but are given here as received from medline.
